## Process for synthesizing N-(mercaptoacyl)amino acid derivatives from alpha-substituted acrylic acids

### Abstract

The instant invention relates to a process for preparing a compound of formula (I):

(I)

said process comprising a step (B) which consists in performing a Michael addition of a thioacid RS4H on to an  $\alpha$ -substituted acrylamide derivative.

The invention also relates to the enantioselective synthesis of compounds of formula (I) wherein R2 is other than H, in the preferential (S,S) configuration:
